

Every ship should have one!

# **COMMERCIAL** SHIPPING

Dependable up to 500 bar - anywhere, anytime.

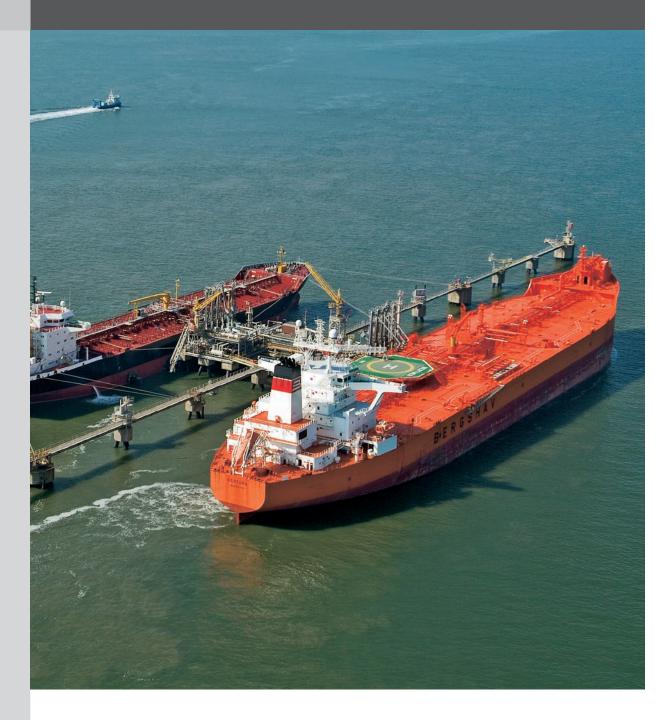

### Sauer Compressors for Shipping.

International shipping with its stringent requirements for quality and reliability is Sauer's traditional area of activity. Our starting and working air compressors have proven their reliability in this demanding market. They are among the most modern and most economic compressors available today.

In particular the low maintenance 3-stage air-cooled starting air compressors have established themselves as benchmark for modern and cost effective starting-air compressors due to

less temperature

- less maintenance cost
- less installation cost

### **Our Product Range**

/////Passat

/////Typhoon

### **2-stage air-cooled starting-air compressors**

Today, the principle of air cooling is an international shipbuilding standard when starting air compressors of less than 80 m<sup>3</sup>/h or 15 kW are concerned. Back in the 50s, Sauer had already started the development of air-cooled compressors in this capacity range as an alternative to water-cooled units which are in general high maintenance and more prone to failure.

Today, Sauer's 2-stage air-cooled starting air compressors are among the most modern and low maintenance compressors available worldwide. More than a thousand of these dependable compressors are delivered to our customers every year.

If you require references, please do not hesitate to contact us at sales@sauercompressors.de

#### **General advantages**

4 | 5

- Low installation cost due to absence of cooling water circuit
- Light-weight and less space required for installation
- Reliable and safe to operate, even at ambient temperatures up to 60°C
- Suitable for even the most difficult ambient conditions

# Low maintenance 3-stage air-cooled starting-air compressors

The reliable workhorse: 3-stage air-cooled compressors have been preferred for a long time by shipyards and ship-owners due to less temperature

- less maintenance co
- less maintenance cost
- less installation cost

Today the 3-stage air-cooled compressors have established themselves as benchmark for modern and cost effective starting-air compressors.

By the partition of the total compression into 3 stages and 3 cylinders the general advantages of air-cooled compressors could also be used for compressor capacities above 80 m<sup>3</sup>/h. The reasons:

- The total heat to be dissipated was divided up into 3 and not only 2 stages
- The heat dissipating surface was increased at constant heat generating volume
- The temperature rise during compression was reduced due to lower stage pressure ratio

If you require references please do not hesitate to contact us at sales@sauercompressors.de

Weights and dimensions for standard units with three-phase A.C. motor, IP 54, and flexible mounting.

# /////Passat

#### WP 81 - 101 L

Compression in 3 cylinders arranged in W-shape ensure only the slightest vibration; open design for easy check of operation

0

0

High performance valves for long maintenance intervals

Fan wheel directly installed on the crankshaft; intrinsic protection of rotating parts

Low recooling temperatures due to sufficiently dimensioned intermediate and aftercoolers and generous cylinder cooling by axial fan

Integrated condensate filter after the 2nd stage

Reliable pressure oil lubrication by a directly driven gearwheel pump, which can be accessed from the outside Monitoring: Safety valves, traditional thermometer, and pressure gauges for all stages. Monitoring of lubrication oil pressure and outlet temperature of the compressed air are standard features

Integrated flexible coupling, safe and low-maintenance

High performance threephase A. C. motors; Optional: diesel motor drive

An attached final separator with automatic drainage and flexible mounting is included in the standard scope of delivery

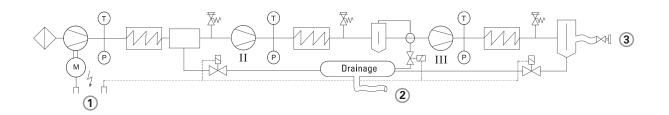

## No interface for cooling water required!

Only 3 interfaces:

- 1 Electric
- 2 Drainage (1 flexible hose)
- 3 Compressed air outlet

#### Features

- Capacity from 63 up to 360 m<sup>3</sup>/h
- Reliable and safe operation up to 60°C
- No changes in engine room design necessary
- Lowest compression temperatures due to 3 stages
- Extended life time of the valves (up to 4,000 hours) with less maintenance costs due to lowest compression temperatures
- Designed for use with standard mineral oil SAE 30
- Standard warranty of 24 month
- More than 20.000 units sold since 1977
- Operation of air cooled compressors independent from central CW system, as emergency compressor
- Less installation costs up to 7.500 USD per ship for the yard due to no cooling water (less interfaces)

### 2-stage water-cooled starting-air compressors

Towards the middle of the 90s, Sauer Compressors developed a new range of 2-stage watercooled compressors for use in shipping. With the cylinders arranged in V-shape and advanced competitive design features, we are able to offer a range of low maintenance and reliable compressors of this traditional design.

The 2-stage water-cooled starting air compressors produced by Sauer Compressors are part of an international shipbuilding standard. More than a thousand of these dependable compressors are delivered to our customers every year.

If you require references, please do not hesitate to contact us at sales@sauercompressors.de

# /////Typhoon

#### WP 200-240

Monitoring: reliable traditional thermometer, and pressure gauges for all stages. Monitoring of outlet temperature of the compressed air and cooling are standard features Suitable for fresh water and sea water. Optionally Exchangeable cylinder available with attached liners ensure lowest cooling water pump maintenance costs Modern V- or W-shape arrangement of cylinders ensure only the slightest vibration and easy maintenance; open design for easy check of **Replaceable cooling inserts** operation made of CuNiFe, easy to inspect ..... **High performance 3-phase** Robust design: Crankshaft is standard A.C. motors; supported by roller bearings **Opitional: Diesel motor drive** on either side An attached final separator with Corrosion protection by easily exchangeable automatic drainage and flexible mounting is included in the standard zinc protection

> Integrated flexible coupling, ..... low-maintenance and safe

scope of delivery

#### **General advantages**

- Low vibration
- Exchangeable cylinder liner
- Exchangeable cooler inserts
- Short stroke machine for compact dimensions and low vibrations
- Pressure oil lubrication for WP 200, WP 240 and WP 400
- Easy access to all maintenance and operation points

**Screw-type compressors**, unlike oscillating reciprocating compressors, compress air in rotating screws, and operate without valves.

Sauer Screw-type compressors offer much more than industry compressors since they are the synthesis of thousands of industry compressors and of our fundamental knowledge of the requirements of international shipping. The particular design features of Sauer's screw-type compressors ensure trouble-free operation on the seven seas.

As an alternative to the screw-type compressor, Sauer is able to deliver reciprocating **piston-type compressors** based on the well-known range of starting air compressors. Compared with screw-type compressors, these types are more suitable for shorter operation intervals due to their lower energy consumption as they are start-stop controlled.

The distinct advantages of piston compressors are the standardised parts and the similarity in terms of design with air-cooled starting air compressors. If you choose your ship compressors carefully, your starting, control and working air compressors will all have the same wearing parts.

#### **Our Recommendation**

Sauer delivers both types of compressors. For requirements under 100 m<sup>3</sup>/h, we recommend that you use piston compressors and for performance requirements over 300 m<sup>3</sup>/h, we recommend screw compressors. For the 100 m<sup>3</sup>/h to 300 m<sup>3</sup>/h range we also recommend screw compressors, provided that the annual operation time is greater than 4,000 hours.

For more information or references please do not hesitate to contact us at **sales@sauercompressors.de** 

Performance data with 5% tolerance, referred to 20°C and an air pressure of 1,013 mbar. Capacity of screw-type compressors according to DIN-ISO 1217 Annex C.

Weights and dimensions for standard units with three-phase A. C. motor, IP 54, and flexible mounting.

Water-cooled screw-type compressors upon request.

\* Larger capacity up to 2000 m<sup>3</sup>/h or capacity for other final pressures upon request.
